Jonathan R. Genzen, MD, PhD, Chief Medical Officer

Patient Age/Sex: 30 years Female

**Specimen Collected: 2/6/2025 12:56 MST**

**VZV Antibody IgG CSF** | **Received: 2/12/2025 14:52 MST** | **Report/Verified: 2/12/2025 14:56 MST**

Procedure	Result	Units	Reference Interval
VZV Antibody IgG CSF	0.99 <sup>i1</sup>	S/CO	[<=0.99]

**Test Information**

i1: VZV Antibody IgG CSF  
 INTERPRETIVE INFORMATION: VZV Ab, IgG, CSF

<=0.99 S/CO: Negative - No significant level of detectable varicella-zoster IgG antibody.

>=1.00 S/CO: Positive - IgG antibody to varicella-zoster detected, which may indicate a current or past varicella-zoster infection.

The detection of antibodies to varicella-zoster in CSF may indicate central nervous system infection. However, consideration must be given to possible contamination by blood or transfer of serum antibodies across the blood-brain barrier.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
