09-Dec-19 11:25:00 HSV 1 Glycoprotein G Ab, IgG:
 REFERENCE INTERVAL: HSV 1 Glycoprotein G Ab, IgG

- 0.89 IV or less Negative - No significant level of detectable IgG antibody to HSV type 1 glycoprotein G.
- 0.90 - 1.09 IV Equivocal - Questionable presence of IgG antibody to HSV type 1 glycoprotein G. Repeat testing in 10 - 14 days may be helpful.
- 1.10 IV or greater ... Positive - IgG antibody to HSV type 1 glycoprotein G detected, which may indicate a current or past HSV infection.

Individuals infected with HSV may not exhibit detectable IgG antibody to type-specific HSV antigens 1 and 2 in early stages of infection. Detection of antibody presence in these cases may only be possible using a non-type specific screening test.
