20-Dec-19 15:18:00 Ova and Parasite, Fecal Interpretation

Specimen positive for:
 Ascaris lumbricoides ova

20-Dec-19 15:18:00 Ova and Parasite, Fecal Interpretation:

INTERPRETIVE INFORMATION: Ova and Parasite, Fecal

Method for identification of Ova and Parasites includes wet mount and trichromes stains.

Due to the various shedding cycles of many parasites, three separate stool specimens collected over a 5-7-day period are recommended for ova and parasite examination. A single negative result does not rule out the possibility of a parasitic infection. The ova and parasite exam does not specifically detect Cryptosporidium, Cyclospora, Cystoisospora, and microsporidia. For additional test information refer to ARUP consult, <https://arupconsult.com/content/diarrhea>
