Procedure	Result	Units	Reference Interval
HPVG Source	Cervical		
HPV Genotype 16 by TMA	Detected *		
HPV Genotype 18/45 by TMA	Detected * ⁱ¹		

Test Information

i1: HPV Genotype 18/45 by TMA

INTERPRETIVE INFORMATION: HPV Genotype

This test detects E6/E7 viral messenger RNA of the high-risk HPV types 16, 18, and 45 only. It is intended for use in women 21 years and older with ASC-US cervical cytology results and in women 30 years and older as a follow-up to a positive high-risk HPV screen. Sensitivity may be affected by specimen collection methods, stage of infection, and the presence of interfering substances. Results should be interpreted in conjunction with other available laboratory and clinical data. This test is not intended for use as a stand-alone test.

HPV testing should not be used for screening or management of atypical squamous cells of undetermined significance (ASCUS) in women under age 21.
