

Specimen Collected: 12-Oct-23 15:45

HPV High-Risk with Reflex to Genotype	Received: 12-Oct-23 16:10	Report/Verified: 12-Oct-23 16:14
---------------------------------------	---------------------------	----------------------------------

Procedure	Result	Units	Reference Interval
HPV Source	Cervical		
HPV, High Risk by TMA	Detected * f1 i1		

HPV Genotype	Received: 12-Oct-23 16:10	Report/Verified: 12-Oct-23 16:18
--------------	---------------------------	----------------------------------

Procedure	Result	Units	Reference Interval
HPVG Source	Cervical		
HPV Genotype 16 by TMA	Detected *		
HPV Genotype 18/45 by TMA	Detected * i2		

Result Footnote

f1: HPV, High Risk by TMA

HPV, High Risk by TMA is detected. HPV Genotype has been added. Additional charges apply.

Test Information

i1: HPV, High Risk by TMA

INTERPRETIVE INFORMATION: HPV, High Risk by TMA

This test detects E6/E7 viral messenger RNA of 14 high-risk HPV types (16, 18, 31, 33, 35, 39, 45, 51, 52, 56, 58, 59, 66, and 68) associated with cervical cancer and its precursor lesions. This test does not discriminate between the 14 high-risk HPV types. Sensitivity may be affected by specimen collection methods, stage of infection, and the presence of interfering substances. Results should be interpreted in conjunction with other available laboratory and clinical data. A negative high-risk HPV result does not exclude the presence of other high-risk HPV types.

HPV testing should not be used for screening or management of atypical squamous cells of undetermined significance (ASCUS) in women under age 21.

i2: HPV Genotype 18/45 by TMA

INTERPRETIVE INFORMATION: HPV Genotype

This test detects E6/E7 viral messenger RNA of the high-risk HPV types 16, 18, and 45 only. It is intended for use in women 21 years and older with ASC-US cervical cytology results and in women 30 years and older as a follow-up to a positive high-risk HPV screen. Sensitivity may be affected by specimen collection methods, stage of infection, and the presence of interfering substances. Results should be interpreted in conjunction with other available laboratory and clinical data. This test is not intended for use as a stand-alone test.

HPV testing should not be used for screening or management of atypical squamous cells of undetermined significance (ASCUS) in women under age 21.
