

# Hereditary Cancer Testing Suite

## ARUP'S EXCEPTIONAL STEWARDSHIP ELEVATES CARE

Each sample is more than a piece of data, it's a snapshot of a patient's health status.

That's why ARUP provides more than a test. We have designed every stage of testing and analysis to facilitate better patient outcomes.

## EXPERTISE THAT PERSONALIZES MEDICINE

A member of our team of pathologists, geneticists, genetic counselors, and clinical variant scientists personally reviews each case to ensure accuracy and relevancy. By integrating their knowledge of the latest guidance for gene interpretation with each patient's clinical context, our experts personalize diagnostic medicine.

## CUSTOMIZED REPORTS OFFER INDIVIDUALIZED INSIGHTS

We provide customized reporting with patient-specific details to offer individualized and actionable insights.

## FLEXIBLE OPTIONS FOR EACH SITUATION

Select the test combination that best suits your patient's needs. We offer both multigene panels and single gene tests that include:

- Overlapping genes relevant to most cancer syndromes
- Genes unique to specific familial cancer types
